Month_Name	Summary This project presents a comprehensive Coffee Shop Sales Analysis Dashboard designed to monitor sales performance, customer purchasing behavior, product demand, and store-level operational insights. Overall Sales Performance - The coffee shop generated approximately \$698K in total sales. - Customer footfall exceeded 149K visitors, indicating strong customer traffic. - Average customer spending per visit is \$4.69. Peak Hour Analysis - Orders peak significantly between 7 AM and 10 AM. - Highest quantity ordered occurs around 9 AM. - Demand drops gradually after evening hours. Product Category Performance - Coffee contributes the highest share (39%) - Tea contributes around 28% - Bakery contributes around 12% - Drinking Chocolate contributes around 10% Size Preference Analysis - Large and Regular sizes dominate customer orders (~30% each). - Small-sized orders are relatively low (~9%).				
January	Top Product Analysis - Barista Espresso (~\$91K) - Brewed Chai Tea (~\$77K) - Hot Chocolate (~\$72K) - Gourmet Brewed Coffee (~\$70K) Weekday Sales Analysis - Sales remain relatively stable throughout the week. - Slightly stronger performance observed during weekends and Fridays. Conclusion The Coffee Shop Sales Dashboard provides a comprehensive view of sales performance, customer behavior, and operational trends across multiple store locations. By analyzing key metrics such as total sales, customer footfall, product demand, peak ordering hours, and store-wise performance, the dashboard helps management make data-driven decisions to improve business efficiency and profitability. The analysis reveals that coffee products contribute the highest share of revenue, while morning hours generate the maximum customer traffic, highlighting opportunities for targeted staffing and promotional strategies. Additionally, insights into customer preferences, order sizes, and top-selling products support better inventory planning and menu optimization. Store-level comparisons further help identify high-performing locations and areas requiring improvement. Overall, this project demonstrates how business intelligence and data visualization can transform raw sales data into actionable insights, enabling coffee shop management to enhance customer experience, optimize operations, increase revenue, and support long-term business growth.
